send-push — логика 3 каналов (v5.1)

1. Получить user_settings (push_telegram, push_web, push_native)
2. Проверить тихие часы (quiet_hours_from/to)
3. Если пользователь активен <5 мин – только in-app (Realtime)
4. Приоритет каналов:
 - a) Telegram Bot API – если telegram_id AND push_telegram = true
 - b) FCM Native – если push_subscriptions (android/ios) AND push_native
 - c) Web Push – если push_subscriptions (web) AND push_web
5. Обычное: ОДИН канал (a > b > c)
6. Критичное (деньги, сделки): ВСЕ каналы
7. is_pushed = true

verify-document / convert-xp

- ```
-- verify-document
```
1. Проверить document\_hash на дубли
  2. AI: сравнение лица (паспорт vs селфи)
  3. confidence >= 90% AND match → auto\_approved
  4. Иначе → manual\_review (модератору)
  5. approved → is\_verified = true, verification\_level = 1
- ```
-- convert-xp
```
1. Курс из xp_rates (последний по effective_from)
 2. xp_balance * rate = рубли (копейки)
 3. balance += рубли, xp_balance = 0
 4. transaction (type: 'xp_conversion')
